# Uncover security and software vulnerabilities — and close the gaps faster

Complement your Crosslake engagement with any of our Insight Applications, and get expert interpretation of your results from our team of senior technology practitioners. Our popular bundles are designed to streamline your path to actionable insights related to software quality, company security and software security, while also saving you the hassle and expense of managing each assessment independently.

SOFTWARE QUALITY		COMPANY SECURITY		SOFTWARE SECURITY	

Open-source assessment

Assess risks related to public, third-party code

Does the company own what they're selling?

Is the software at risk for a cyberattack?

Code quality assessment

Determine code quality and assess maintainability risks

Are outdated languages in use?

Is the code difficult to maintain?

Attack surface penetration test

Identify cyberattack weaknesses on the company perimeter

Are there vulnerabilities or security flaws associated with any domains, IP addresses and hostnames?

Data theft risk assessment

Find data that is exposed or available on the dark web

Are there exposed company documents, intellectual property and IT assets?

Are there mentions of the company on the dark web?

How well are employees protecting company data?

Web app / API penetration test

Identify cyberattack weaknesses in SaaS applications

Is the customer-facing application or API secure against the top ten OWASP vulnerabilities?

Is the company meeting customer and compliance requirements around security testing?

Static application security test

Find CWE security weaknesses in code

How easily could an attacker exploit vulnerabilities or misconfigurations in the company's app?
